

1st International Conference on “Operations and Supply Chain Excellence” (ICOSCE): 2018 - For Socio, Economic and Environmental Development (October 24-25, 2018)

Dr C V Sunil Kumar, Mr S Satish Kumar & Mr S N Mantha : Conference Conveners

About the Conference

In the current scenario the business environments have become very dynamic in nature with ever increasing competition among the supply chains. Thus, a company's success is largely dependent on the competitive operations and supply chain decisions. The scopes of these decisions are greatly expanding than ever before and the impact is increasingly felt by the associated companies along the value chains and ultimately the society at large. Hence, now the companies are extremely conscious and cautious about timely making the appropriate supply chain decisions using more evidence based scientific and systematic methodologies. In parallel to this, now-a-days the data driven decision making approaches have also become more imperative yet achievable, since the data processing, computing and storing capacities have been tremendously increased.

Owing to the impact of operations and supply chain decisions on the supply chain performance, the pursuit of decision making excellence has always been an important aspect both in research and industrial practice. Having highlighted about the prominence of decision making, the proposed conference is aimed at laying out a common platform for the students, scholars, researchers, academicians and industry practitioners from different parts of India and abroad to come, meet and discuss about the latest advancements. The conference will be more focused on promoting the application based management techniques and methodologies that can improve the operations and supply chain decision making capabilities of the companies. Further, in this conference the participants will have opportunities to interact with some of the renowned experts and industry leaders to churn out new ideas for their future works.

Takeaways From the Conference

The proposed conference is intended to

- Organize key note speeches delivered by some of the noteworthy industry leaders to understand changing industry needs, trends and churn out the innovative thought processes among the participants.
- Offer a common platform for students, research scholars, academicians and industry practitioners to meet, discuss and share their learning about the key issues and recent trends related to operations, supply chain management and allied management studies.
- Feature functional wise panels to learn, discuss, and nurture further insights along the various conference themes as per the participants' interests.
