

**Workshop on “Cyber Law”
(September 24, 2018)
Mr A Rakesh Phanindra : Workshop Director**

Introduction

In today’s global, digital world, data rule. Safeguarding intellectual property, financial information, and the company’s reputation is a crucial part of business strategy. Yet with the number of threats and the sophistication of attacks increasing, it’s a formidable challenge. Companies that understand the value that security brings to the business also ensure that they have a comprehensive strategy in place and that they have the processes and procedures to back up their vision. The guiding principles for strategy are driven, in large part, by their data.

The development of information technology continues to give rise to novel and complex legal problems related to the use of internet and computers. To ensure the appropriate and lawful use of technology, it is necessary to have certain rules and regulations. Rules and regulations that govern the transactions carried out with the use of computers and internet comprise Cyber Laws. It is also referred to as information and communications technology law and covers electronic governance, intellectual property, cybercrimes, telecommunications, data protection and privacy.
