

A Three-day Training Programme on
CYBER CRIME AGAINST WOMEN & SAFETY MEASURES

14th – 16th December, 2016.

Institute of Public Enterprise, Osmania University Campus, Hyderabad

INTRODUCTION & OBJECTIVES: As more individuals own and operate Internet-enabled devices and more critical government and industrial systems rely on advanced technologies, the issue of cybercrime has become a crucial concern for both the general public and professionals alike. While women benefit from using new digital and Internet technologies for self-expression, networking, and professional activities, cyber victimization remains an underexplored barrier to their participation. Women often outnumber men in surveys on cyber victimization.

This Programme explores various cyber crimes like adult bullying, cyber stalking, hacking, defamation, morphed pornographic images, and electronic blackmailing. These and other tactics designed to inflict intimidation, control, and other harms are frequently committed by perpetrators who, for many reasons, are unlikely to be identified or punished.

The interactive discussion will focus on Cyber security risks facing by Women and how those risks can be identified and managed. This programme will provide you the latest developments in Cyber Security Management Best Practice. Through presentation and discussions with industry experts, you will gain a thorough understanding of the standards that will underpin and support your safety and security in all places including the work place.

PROGRAMME OUTLINE

- Introduction of Cyber Security
- Categories of Cyber Crimes
- Modus Operandi In Cyber Crimes
